QA ENGINEER | HRIS DOMAIN KNOWLEDGE

ISTQB Certified Tester | BSc Software Engineering – First Class Honours

27 September 2026

Re: Application for Quality Assurance / HRIS Opportunities

Dear Hiring Manager,

I am writing to express my interest in opportunities within your organisation in Quality Assurance, Software Testing, HRIS or People Systems. I bring hands-on software quality assurance experience, a Bachelor's degree in Software Engineering with First Class Honours, ISTQB Foundation Level certification, and nearly 10 years of professional experience in Human Resources, including senior HR leadership with Marriott International.

I am currently working as an Associate Quality Assurance Engineer at Arimac Lanka, where I test a large-scale banking solution made up of a customer mobile app and an admin portal. My experience includes functional, regression, UI, API and exploratory testing, defect management, cross-browser and cross-device testing, and automation testing. I have worked on banking, gaming, real-time entertainment and mobile applications, including QA across more than 60 iOS and Android games.

My technical experience includes Selenium, Playwright, REST APIs, Postman, Bruno, SQL, JavaScript and Git/GitHub. I have also tested real-time systems involving WebSockets, multiple application environments (DEV, UAT and Staging) and complex business workflows, such as a live TV voting system. This experience has strengthened my ability to understand technical requirements, identify risks, investigate defects and work closely with development and product teams in Agile environments.

In addition to my QA experience, I have strong domain knowledge in Human Resources Information Systems (HRIS) and HR technology. Before moving into software engineering and QA, I spent nearly 10 years in Human Resources, progressing through HR leadership roles and serving as Head of Human Resources at Weligama Bay Marriott Resort & Spa. This gave me a practical understanding of HR processes, employee lifecycle management, HR operations, stakeholder requirements and business workflows.

My HR and technology backgrounds also come together in my final-year degree project, **Interli HRIS**, a Human Resources Information System I designed and developed as part of my Software Engineering studies. The project combined my practical HR knowledge with software engineering, database design and application development, including HR workflows, employee management and rule-based performance evaluation.

This combination of technical QA capability and HR/HRIS domain knowledge lets me contribute from both the technology and the business side. I can understand what business users need while also analysing systems, designing test scenarios, identifying defects, validating APIs and data, and working with technical teams to deliver reliable software.

I am particularly interested in opportunities where I can keep developing as a QA and Quality Engineering professional while also applying my HRIS and business systems knowledge. Thank you for considering my application. I would welcome the opportunity to discuss how my technical experience, HRIS knowledge and wider professional background could contribute to your organisation.

Yours sincerely,

Numesh Jayamanne
